

Break point:

The screenshot displays the Chrome DevTools interface with the 'Sources' panel active. The file 'part1.js' is open, showing the following code:

```
1 function printSum() {  
2   debugger  
3   let num1 = document.getElementById("num1").value;  
4   let num2 = document.getElementById("num2").value;  
5   document.getElementById("sum").innerHTML = "Sum: " + calculateSum(num1, num2);  
6 }  
7  
8 function calculateSum(num1, num2) {  
9   let result = num1 + num2;  
10  return result;  
11 }
```

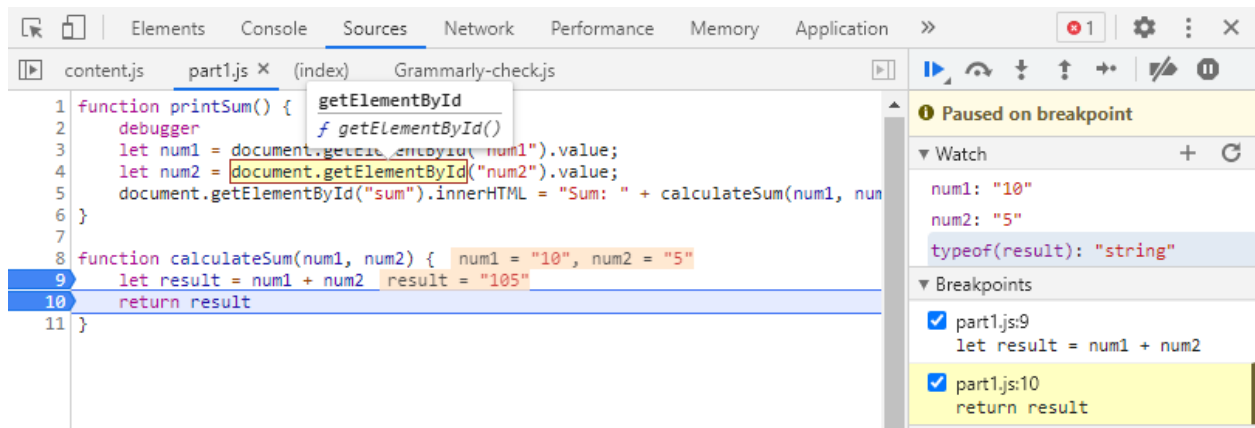

Two breakpoints are set in the 'Breakpoints' sidebar:

- part1.js:2 debugger
- part1.js:9 let result = num1 + num2

The 'Scope' and 'Call Stack' panels show 'Not paused'. The 'Console' panel at the bottom shows a red error message:

```
Failed to load resource: the server responded with a status of 404 (Not Found) /favicon.ico:1
```

Watch expression:

Fix:
